

PentAxion

Harmonises the mix,
hones efficiency

This multifunctional ecological adjuvant regulates pH, reduces foam, improves wetting, drift, and water hardness

Five keys
to better application

1

pH regulator with colour change.
Reduction of pH to achieve a slightly acidic broth (< pH 6.5).

2

Antifoam, prevents foam formation in the tank.

3

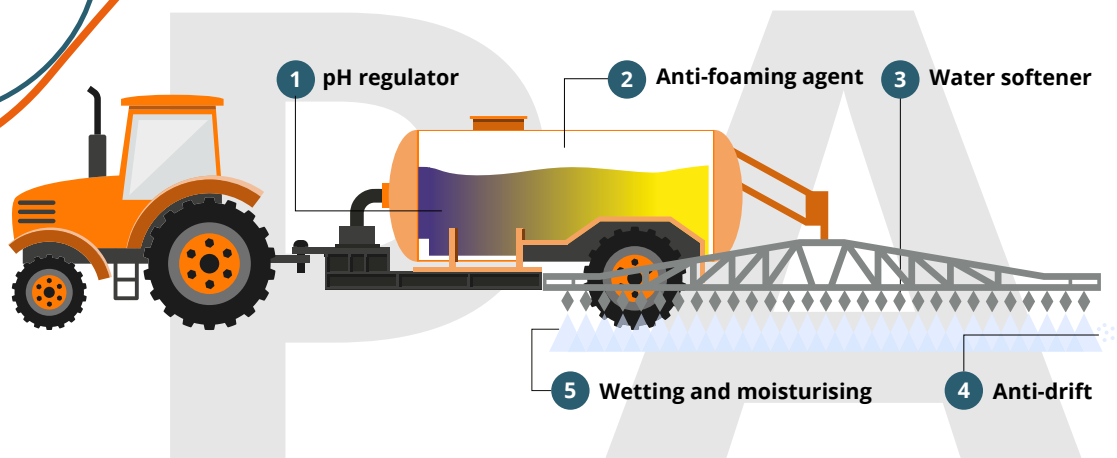

Wetting and moisturising agent, facilitating the homogeneous mixing of products in the broth and reducing drop size during application, achieving better coverage of the broth on leaves.

4

Water softener, due to its acidification capacity, it prevents nozzle clogging caused by lime and carbonates.

5

Anti-drift, increasing the density of the broth and droplets during application to reduce drift in medium or high-pressure spraying.

AFEPASA
SINCE 1893

MAIN BENEFITS

- > Improves the efficacy of foliar treatments.
- > Prevents clogging and foaming.
- > Reduces preparation time and the use of inputs.
- > Compatible with a wide range of phytosanitary products, fertilisers and biostimulants.
- > Compatible with emulsion oils, even improving their quality.

DOSAGE AND HANDLING

1 ml/L

1 Apply **PentAxi** as the first product in the preparation tank and stir well:

A If the broth turns **yellow**, the applied dose has adjusted the pH below 6.5 for proper mixing.

B In the broth turns **purple**, apply small quantities of the product until the colour change occurs.

2 Add the remaining products once the pH has stabilised, according to the usual mixing order.

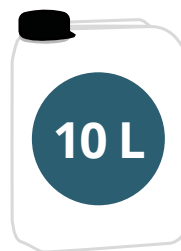

COMPOSITION (% W/V)

Potassium (K₂O): 6,3 %
Density: 1.15 g/ml

PentAxi

PRESENTATION

Available
in 10 L container

COLOUR CHANGE ACCORDING TO THE pH OF THE LIQUID

Example of the effect of **PentAxi** on the colour of the broth according to its pH.

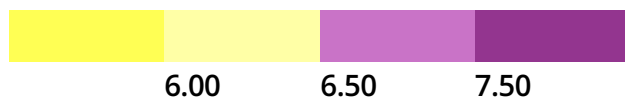

Liquid above
pH 6.5

Liquid below
pH 6
